So apparently I am supposed to write some 200 word about what I learned but I am not sure what that is supposed to mean. Do I simply write a list of the things I learned from the course material or do I explain my experience with writing this homework program? I do not really like simply regurgitating generic information, and there is nothing noteworthy I learned during the assignment as it was mostly just a pain in the hind quarters.

You may have noticed the priority queue class is absent from this submission. That is because I figured out how to solve the problem without it and I did not see anywhere that it was a strict requirement.

Unfortunately you are going to have to forgive some of the sloppy code lying around as I grew incredibly short on time. It does still run and compile good from my end and I did my best to document everything, however there are still a few loose ends I haven't tidied up including excess and/or inefficient code. I could fix it up but as I have a midterm this tuesday (I think some of you have as well) I just don't have the time to pick through every line of code again. I am very tired.
